

VISO

Device and classroom management systems operating locally and in the cloud

Radix VISO combines mobile device management and classroom management software into a comprehensive solution. The innovative, cloud-based system is optimized to remotely manage multiple technologies before, during and after class.

VISO increases instructional and administrative effectiveness by reducing operational complexity. This saves time and money traditionally spent on the multiple systems needed to make teaching, moderating and managing devices smarter and more focused.

Educators

Effectively integrate students' devices into the learning process by supervising and moderating device usage.

Managers

Empower teachers, impose school policies, enhance productivity and maximize your investment.

IT Administrators

Centrally manage, support and maintain thousands of devices, through any browser.

A unified device and classroom management solution for the entire school ecosystem

The VISO system solves the education disruption challenge by providing an innovative device and classroom management solution, tailored for the entire school ecosystem.

The system provides teachers, IT administrators, managers and parents with a relevant set of tools and customized interface under the umbrella of a single central platform. VISO is compatible with any device type or operating system (Windows, Android, Chrome OS and iOS).

Educators

Managers

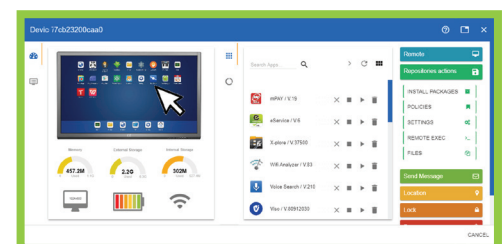

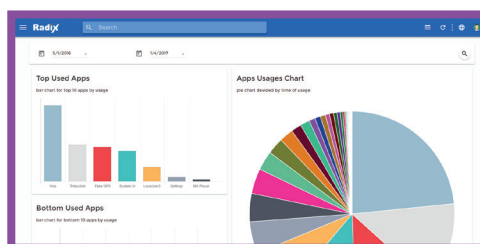

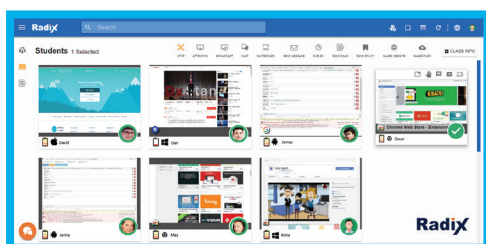

IT Administrators

- **Share** teacher's screen with students and **showcase** selected students' screens
- Focus students on task, **apply policies** and set pre-defined '**kiosk modes**'
- **View thumbnails** of students' screens in real-time
- **Lock** students' screens for **attention** and **block** websites and apps
- View and respond to **electronic 'hand raises'** silently
- **Control** and share students' screens **remotely**
- **Engage** in collaborative learning with on-screen multi-user **whiteboard** and **document sharing**
- **Distribute and collect** content materials, share **e-books** and websites
- **Assess** learning benchmarks with polls and **quizzes**

- Determine application and device **usage patterns** with **big data analytics**
- **Impose policies**, minimize resource consumption and locate your assets
- **Empower** staff and **delegate privileges** according to their roles (admins, teachers, observers)
- **Monitor** technology **usage** and operation: nationwide, districtwide, schoolwide
- Automatically create, access and **analyze diagnostic indicators and ROI reports**
- **Monitor all devices** centrally, **evaluate performance** and minimize resource consumption
- **Broadcast emergency alert** messages and important notices to all screens

- Provide **remote assistance**, work alongside the user or take control over his screen
- Centrally **manage apps**, device and OS settings and apply **usage policies**
- Streamline **software distribution** and OS updates for the entire device fleet
- **Track** and secure **devices** with the **anti-theft** module
- Achieve proactive and **effective monitoring** via **alerts** and triggers
- **Produce** detailed device **usage reports**
- **Group and tag** devices according to pre-defined criteria, with advanced filtering tools
- **Apply workflows**, streamlining several tasks at once
