VISO Device Management

Device and classroom management platform: Comprehensive, easy-to-use and cost effective

Solution snapshot

- A scalable cloud-based platform, also operating offline for full redundancy. Works over the web, from **anywhere - with no need for on-site servers or** complex infrastructure.
- Manage scores of schools across multiple districts - all from the same easy-to-use web portal
- Access via any browser, with a unique tailored interface: Customized and optimized to empower teachers with state-of-the-art classroom management tools, and IT administrators with powerful device management tools.
- Advance security layer for end-to-end encrypted communication.
- Cross platform operation, supporting all types of device (laptops, tablets, interactive touch screens and smartphones) and all major OS (MS Windows, Apple Mac and iOS, Google Android, Chromebook and Linux) - operating at the same school and even in the same classroom.
- Integration with Google docs, Office 365, Dropbox and other 3rd party's solutions

Management solution tailored for:

| Tablets and Chromebooks	Laptops and Desktops	Mac and iPads

Custom-devices and OPS	Interactive touch screens	Digital signage

Main functions by role and mission

Tailored features for educators

- Share screens - one to many and many to one
- View screen thumbnails in real-time
- Share and open e-books and websites
- Lock screens for attention
- Create unlimited number of class setups
- Block websites and apps
- Focus students on task, apply policies
  Set pre-defined kiosk modes
- Take control of remote devices for assistance
- Log class history and journal
- Engage students with an interactive collaborative
  multi-user whiteboard
- Manage in-class chatting and messaging
- View and respond to electronic hand-raise
- Record lessons and student operation
- Create in-class learning work groups
- Distribute and collect documents and content
  materials
- Conduct exams, pop quiz, polls - true/false
- Gamification and contests
- Integrate and manage in-class technology and
  student devices in the learning process
- Integrate with external data sources

Device administration for IT

- Scale to manage thousands and hundreds of
  thousands of devices seamlessly
- Group and tag devices according to pre-defined
  criteria, with advanced filtering tools
- Manage device, apps and OS settings
- Provide remote assistance, work alongside the user
  or take control of his screen 1:1
- Manage ad-hoc remote-control sessions
- Apply and impose device, apps and web usage
  policies - manually or triggered
- Create Geofences and location perimeters
- Set predefined triggers and alerts
- Track device location, lock lost or stolen devices and
  sound an alarm using the Anti-theft module
- Delegate rights to different users according to roles
- Push applications, installations and updates to all, or
  selected devices
- Send files to remote device (single file or multiple
  file bundles)
- Apply workflows to simplify batch tasks
- Run remote commands and scripts
- Collect device, web and app usage info and detect
  usage patterns for fact-based decisions
