

Integrating Newline Secure with Kokomo24/7® Safety Cloud platform

This guide will walk you through integrating Newline Secure with Kokomo Platform.

Step 1: Create device group

- On the 'Device' tab, look for the 'Groups' sidebar and click the 'Add' icon
- If you do not see the 'Groups' sidebar, then you can click the 'Groups' button to open it.
- Type in a name for your group in the text box that appears, and click the 'Checkmark' icon

Step 2: Register your device

There are three methods for registering a device to a Newline Secure group:

- Single Device Registration
- Bulk Device Registration
- Registration via the Newline Secure Android application

2.1 Register your device on Newline Secure web console

2.1.1 Single Device Registration

- On the Device tab, navigate to and click the 'Add' button
- Input the device's serial number and set a name for the device

2.1.2 Batch Register

- On the Device tab, navigate to and click the 'Bulk Add' button
- Download the import template
- Enter your devices into the Excel table and save the import template to your computer (.xlsx format)

- Upload the Excel file and click the confirmation button to complete the bulk-registration

2.2 Registration via the Newline Secure Android application

- Open the 'Newline Secure' application on your display
- Tap 'Account Binding'
- Login with your Newline Secure account information
- Enter a device name for this display
- Select at least one group for this display to be registered to

Step 3: Customize your global alert settings

- On the 'Alert Settings' tab, you can customize the alert background image and audio level for your Newline Secure alerts:
- These alerts automatically apply globally across all Newline Secure groups and devices

Step 4: Generate CAP 'Alert' Information

To create a **API Connector** to attach to **Kokomo Platform**, we first need to generate the Common Alerting Protocol (CAP) endpoint information for each Newline Secure group:

- Click the 'CAP' button in the device group list to generate CAP integration information
- Now you should see a window appear that contains the API endpoint information for your Newline Secure group. Keep this window open as we will need to utilize this information
- - Ensure that **'Security Platform'** is set to **Kokomo**

You will find the following information in the CAP endpoint window:

- Webhook URL
- Key
- Value
- Body [Alert] & [Clear]

Please copy these fields into the Kokomo Platform. This step enables the Kokomo Platform to bind your Newline devices and trigger alert or cancel alert notifications through Kokomo.

Step 5: Set up on Kokomo24/7® Safety Cloud platform

Please download the following file to set up the CAP information configuration described above: Kokomo_Manual

Congratulations!
